## Privileged Medical Services

### Stem Cell

Liv Hospital Regenerative Medicine and Stem Cell Production Center is a first in-hospital center of its kind complying with international GMP (Good Manufacturing Practice) standards in Turkey. Our center offers solution to medical and cosmetic issues such as, peripheral arterial diseases, plastic surgery, tendon damages, soft tissue, burn, injury and scar repairs etc. by using regenerative cells obtained from the patient's own tissue.

### Stop Aging

'Stop Aging' program aims to keep people above 40 years, younger based on 'absolute sense of well-being'. Your lifestyle may worsen or alleviated congenital or acquired deteriorations in enzymes that regulate the chemistry of the body. 'Stop Aging' program maps your genomic structure, by analyzing chemical formula of the body. All treatments from nutrition plan to active cosmetics are designed especially for the person with 'Healthy Life Management Council'. This council consists of many specialists and adds a multidisciplinary approach to 'stop aging' program.

### IVF

With Liv IVF Clinic's advanced technology and caring staff committed to success through compassionate teamwork, we aim to ensure high rate of pregnancies and live births with patient-specific treatment options. At Liv IVF Clinic we achieve high birth and pregnancy rates by correcting the intrauterine pathologies and abdominal problems using endoscopic surgery, blastocyst transfer (culture), intracytoplasmic morphologically selected sperm injection (MSI) and pre-implantation genetic screening (PGS).

### Oral and Dental Health

At Liv Dental Clinic our aim is to provide latest and highest-quality on general and aesthetic dentistry in a comfortable and relaxing environment, to achieve this our main focus lies on individuals wishes and needs. We offer orthodontic treatments, aesthetical dentistry, oral surgery, implantology, prosthetics, pedodontics by our specialist dentists.

### DaVinci Robotic Surgery

Compared with open surgery, robotic surgery has far lower bleeding and infection rates, as fewer and smaller incisions are required. There are also cosmetic advantages, as the surgical scars healing much more rapidly, this allows patients to get back on their feet more quickly and discharge earlier. At Liv Hospital robotic surgery is applied by experienced specialist in by-pass, general surgery, gynecology, urology and thoracic surgeries.

### Makoplasty

Makoplasty knee and hip replacement surgery is an innovative treatment option for adults living with early to mid osteoarthritis (AO), it is a procedure which begins before patient is taken into operation, where the two implants positions and their interactive motion is optimally planned digitally on a computer. Following this, the bones are resurfaced with the aid of the robotic arm in accordance to the surgical plan, with excellent accuracy.
