NETWORKING THROUGH EFFECTIVE COMMUNICATION

LIV Hospital Group continues to expand its network reach by participating in International Insurance congress and Forum.

Our Group Coordinator, Ms. Meri Istiroti, was one of the key speakers at Uniglobal 10TH Annual Travel Insurance Forum.

Liv Hospital Team also attended one of the biggest International insurance events, 2023 Dubai World Insurance Congress.

EFFECTIVE SOLUTION TO VISION DEFECTS SMILE LASER

SMILE (Small Incision Lenticule Extraction) laser is a popular eye surgery method that has gained popularity in recent years. SMILE is a laser treatment used to correct refractive errors such as myopia, astigmatism, and hyperopia.

The SMILE procedure is performed using femtosecond laser technology. The laser creates a lenticule (small disc-shaped piece) in the corneal tissue inside the eye, which is then removed to correct the refractive error. SMILE is less invasive than other eye surgery methods, which results in faster recovery time and less discomfort.

THE ADVANTAGES OF SMILE INCLUDE:

- Less corneal tissue is removed, which means the cornea is less weakened.
- Less corneal tissue removal results in a lower risk of dry eyes.
- The structure of the cornea is less affected, making it more stable.
- The SMILE procedure is performed using femtosecond laser technology, which allows for a more precise procedure.

If you would like to learn more about the SMILE procedure, you can talk to an eye clinic like Smile Laser or consult with an eye doctor."

AS LIV HOSPITAL,
WE ARE HAPPY TO ANNOUNCE THAT
WE ARE BREAKING NEW GROUND
IN THE WORLD

With our new launched system, we are bringing Liv Hospital to your home. Through Healthverse, wherever you are in the world, you can have experience our hospital and make an online real time virtual tour among all the corners of Liv Hospital including our different departments, patients room, examinations and operating rooms.

Healthverse also provide opportunity to ask our doctors any questions that come to your mind. In this way, you can have every detail about Liv Hospital and the procedure before you come to our hospital.

LIV HOSPITAL GATHERED WITH THE PIONEERS OF THE HEALTH SECTOR AT THE MEDEXPO KYRGYZSTAN FAIR

MedExpo Kyrgyzstan is the main platform in the Kyrgyz Republic for showcasing new developments in healthcare, medical technology, modern consumables, and medical products. The 17th edition of the exhibition was successfully held in Bishkek on April 4th-6th, with Liv Hospital receiving intense participation and interest.

During the exhibition, Liv Hospital held detailed meetings with health service consultants, medical institution leaders, physicians, pharmacy and medical equipment store managers, and public health officials to focus on developing healthcare services between Kyrgyzstan and Turkey.

Liv Hospital's participation contributed to the exhibition's international recognition and will help improve the quality of medical services in the country. MedExpo Kyrgyzstan provides a important opportunity to discover the latest innovations and developments in the medical sector.

INTERVENTIONAL PULMONOLOGY INSTITUTE STARTS TRAINING WITHIN THE BODY OF LIV HOSPITAL

"The Interventional Pulmonology Institute", which was established in our hospital in cooperation with Liv Hospital Vadıstanbul and The World Association for Bronchology and Interventional Pulmonology (WABIP), is starting to provide training to physicians from all over the world.

An important period begins for our country and pulmonary community in the world. Chest diseases specialists and thoracic surgeons from all over the world are coming to our country in order to receive training at the "Interventional Pulmonology Institute", which is established according to the protocol signed between the World Association of Bronchology and Interventional Pulmonology (WABIP) and Liv Hospital Vadıstanbul.

CHECK UP FOR REGULAR DIAGNOSIS AND EARLY PRECAUTION

Regular check-ups and early diagnosis are crucial for maintaining good health and preventing the development of serious health conditions. Here are some reasons why:

1. Prevention: Regular check-ups allow for the detection and prevention of potential health problems before they become serious. Through early diagnosis, health conditions can be managed or even cured with less invasive and less costly treatments.

2. Early Detection: Early detection of diseases and conditions such as cancer, heart disease, and diabetes can greatly increase the chances of successful treatment and recovery. Delaying diagnosis can lead to more complex treatments and a poorer prognosis.

3. Health Maintenance: Check-ups are important for maintaining good health and identifying potential risk factors. They can help patients maintain a healthy weight, manage chronic conditions, and prevent the onset of new health problems.

Overall, check-ups and early diagnosis are essential for maintaining good health and preventing serious health problems. It is important to establish a relationship with a healthcare provider and schedule regular appointments to ensure that you are staying on top of your health.

LIV HOSPITAL ATTENDS NEUROLOGY, NEUROSURGERY AND NEUROGASTROENTEROLOGY SYMPOSIUM IN AZERBAIJAN

A conference in the field of Neurology and Neurosurgery will be held in Azerbaijan on May 6-7. Liv Hospital will talk about Neurology, Brain and Nerve Surgery and Neurogastroenterology together with its expert physician staff in Azerbaijan.
