

PEDODONTICS

Pedodontics is a branch of dentistry that deals with oral and dental problems of babies, childrens and persons who require special attention. Pedodontics is the only branch of dentistry that depends on the age. Pedodontics is limited to an age group, but pedodontists can do all the dentistry treatments such as periodontal treatment, filling and extractions for the needs of children. Just like pediatric doctors, pedodontists also treat oral and dental problems of children. Additionally, they have specialty education towards preventive dentistry, communication with kids, positive behavioral therapy towards beating dentist fear and other techniques.

ORTHODONTICS

Orthodontics is a medical specialty which helps to prevent teeth, jaw, face disorders and aims to give an aesthetic and functionality to the patient. With our expert dentist, we are ready to answer to all your needs using the latest technology and first class materials.

Orthodontic treatment is the treatment ensuring a better facial aesthetics and functioning and a better closing relation between the teeth by interfering the irregularities in jaws, faces and teeth of adults and during growth. Our primary goal is to provide the highest quality orthodontic care in a family-based, state-of-the-art technology practice to enhance your experience as a patient.

EXCELENCE IN DENTISTRY

At Liv Dental Clinic our goal is to provide the latest and highest-quality general and aesthetic dentistry in a comfortable and relaxing environment.

To achieve this goal, our main focus lies on your individual wishes and needs. We are proud to offer you oral diagnosis, aesthetic dentistry, oral surgery, implantology, prototics, orthodontics, pedodontics by our expert dentist. We concentrate on what's important to you as a patient. Professional, timely, personal and considerate service. Your greatest gift to yourself is a radiating smile – our greatest gift in return is your happiness.

IMPLANT

Dental implants are the most predictable and longest lasting way to replace missing teeth. Comparing to the traditional bridges and dentures, implants gives better speaking and chewing functions and also a very natural smile. Implant dentistry offers a clinically proven and safe solution to getting back a great smile and being able to bite and chew with confidence. We offer you excellent results with our expert dentist, first class materials and high end technology.

TEETH WHITENING / BLEACHING

Do you have stained teeth that make you feel self-conscious about smiling? Teeth whitening can be a good solution for certain types of tooth staining. Teeth can be stained by foods, drinks, smoking and certain medications. Teeth whitening is a safe procedure that can lighten the colour of your teeth by using a safe dental bleaching agent. With the latest technology we use your teeth will get the whitening effect, minimum sensitivity and maximum persistency without any harm. Tooth whitening is a minimally invasive, safe and rewarding aesthetic solution for people displaying tooth discolouration.

LAMINATE VENEERS

Veneers are thin, teeth-colored ceramic shells that are being glued to the front side of the teeth and give them a uniform, bright look. Indications are enamel damages and fractures, stains, dental deformity and optimization of the tooth position, i.e. closing of the gap between the frontal teeth. The visible surface of the teeth will be very thinly grinded, with only a minimum of substance getting lost. With laminate veneers you can whiten your teeth, fill the gaps between your teeth and have a beautiful smiling. The results with veneers can be life changing!

ZIRCONIUM CROWNS

Zirconium crowns are one of the aesthetic materials used in dentistry. Thanks to their translucency the texture of the natural teeth is captured wholly. While the enamel of a healthy tooth is completely translucent, the metal supported porcelain teeth can create an opaque display.

Zirconium crowns are much better than porcelain dentures with metal substructure. Purple colored gums that are often seen in gum diseases or gum recession is not seen in zirconium dentures.

ORAL SURGERY

Liv Dental Clinic gives the best medical solutions in world standards. The multi-disciplinary approach at Liv Dental Clinic means we have a maxillofacial surgeon as a member of our team who delivers excellent work when it is required – from wisdom teeth extractions through to jaw surgery.
